DETAILED ACTION

Election/Restrictions

1. Applicant's election of Invention 1 in the reply filed on 01/23/2006 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 9-19 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 01/23/2006.

Information Disclosure Statement

3. The information disclosure statement(s) (IDS) submitted on 11/17/2003, 12/01/2003, and 11/06/2004 is/are acknowledged. The submission is in compliance with the provisions of 37 CFR 1.97 and 1.98. Accordingly, the examiner is considering the information disclosure statement(s).

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-8 and 20-23 are rejected under 35 U.S.C. 102(b) as being anticipated by Densert et al (6159171). For claims 1, 7, and 20-23, Densert et al discloses a head stabilized medical device 1 comprising a stabilized head-dependent wearable frame

Art Unit: 3736

structure as seen in Figures 1-2, plural different vestibular-parameter measuring/modifying data delivering and data receiving devices 19,20,28,30 anchored to said frame, and a communication structure, wires as seen in Figures 1-2, for operatively connecting, transmitting and receiving, said data devices to a computer structure 29 (column 4 lines 49-52) inherently capable of executing real-time vestibular diagnosis/treatment algorithms with feedback responses (column 7 lines 3-6) effective to alter air-pressure stimuli.

6. For claims 2 and 8, Densert et al discloses air-pressure modifying vestibular measuring/modifying devices (column 1 lines 6-48).

7. For claims 3-6, Densert et al discloses a sound delivering device creating pressure waves through air removably insertable into the ear comprising a tubular body 24 with a tapered insertion bulb or nozzle 25 effective to sealably engage the ear, inherently capable of piercing the tympanic membrane, and having a digitally manipulated maneuverable enlargement region 17,18 connected to said body at a proximal location of the inserted end.
